ADSS WebRA Server – Release Notes

This document provides a high-level description of the new features in each release of ADSS WebRA Server.

ADSS WebRA Server 2.5.0	March 2022

New Features

- Internationalisation configurations (WRA-7880)
    - ADSS Web RA Server now supports configurable language and default language options from Configuration Default Settings for the languages supported within the product today.
- Enterprise Certificate Inventory Management (WRA-7636)
    - ADSS Web RA Server now supports enterprise licensing inventory management, enterprises can be assigned license limits for certificate types and lifetimes for the allocation of licenses. Enterprise owners will now have a new dashboard to track their certificate consumption.
- Web RA LRA Operator User Pre-Enrolment (WRA-7637)
    - Web RA Operators can now pre-fill a users subject distinguished name and subject alternative names ahead of user enrolment for pre-vetted users to help minimise user error when enrolling.

Improvements

- Automatic Certificate de-provisioning (WRA-7795)
    - ADSS Web RA Server will now automatically de-provision revoked certificates from SigningHub and Virtual CSP for Desktop Signing.
- Removal of certificate purpose drop down (WRA-7639)
    - The certificate purpose drop down is removed from the 'Create Request' screen to help improve the user experience.
